Brands to build with®

**James Hardie™**

James Hardie Industries is the world's #1 producer and marketer of high-performance fibre cement building solutions. The company empowers homeowners and building professionals alike to achieve the home of their dreams with premium quality solutions that enable endless possibilities for design and aesthetics, while also delivering trusted protection and long-lasting beauty.

At ITI, we pride ourselves on bringing our customers the broadest product range with the biggest brands at the highest quality. The James Hardie range of products continues this tradition, a brand that is highly recognised and a suite of products that meet the highest of quality standards.

#### HARDIE™ FIBRE CEMENT IS PROUDLY AUSTRALIAN MADE

James Hardie was founded in Australia 135 years ago and has been proudly providing Australian Made building products to the market for over 100 years. To help deliver on our purpose to build a better future for all, James Hardie has certified its range of Hardie™ Fibre Cement products with the Australian Made logo.

# Why build with Hardie™

## Key benefits of Hardie™ fibre cement products

### Design versatility

Provides contemporary clean lines and pared-back aesthetics for homes with simple, bold forms.

### Durable

Engineered to endure. Hardie™ fibre cement is fire resistant and resistant to damage from moisture and termites.

### Fire resistant

Will not contribute to the spread of fire.

### Resistant to moisture damage

Offers dimensional stability resisting swelling, movement and warping.

### Flexible colour

Pre-primed and ready to paint in any colour.

### Low maintenance

Easy to clean and holds on to paint well.

### Resistant to termite damage

Stands up to termite attack.

### Made in Australia

Choose Hardie™ fibre cement to support local manufacturing.

# Fibre Cement Solutions

James Hardie™

## It's Possible™ to make modern like never before with James Hardie

### What is fibre cement?

Fibre Reinforced Cement (FRC), or simply, fibre cement, is a popular building material developed by James Hardie in the early 1980s, when pioneering the use of alternative reinforcing materials to create building products. Hardie™ fibre cement products are manufactured in Australia, so by choosing James Hardie, you are supporting local.

### What is Hardie™ fibre cement made of?

Hardie™ fibre cement is made from a mixture of cement, sand, water and cellulose fibre, sourced from sustainably grown pine trees. Small amounts of other chemical additives are used to help the process or provide products with certain characteristics. This unique mixture of materials helps to build beautiful, low-maintenance and durable home exteriors across Australia.

### Some Hardie™ external cladding products look like timber, how are they different?

Hardie™ exterior cladding solutions are engineered to stand up to harsh Australian conditions, including coastal conditions. With products such as Linea™ Weatherboard and Axon™ Cladding, you can harness the features and

charm of traditional weatherboard and vertical-joint timber styles without the hassles of timber and with the benefits of Hardie™ fibre cement. Durable, low maintenance and with broad design potential, Hardie™ exterior cladding is resistant to shrinking, swelling and cracking and will hold paint longer than wood.

### Why should you choose Hardie™ fibre cement products?

Building with Hardie™ fibre cement products give you the power to realise your vision. Bold forms, clean, sleek lines, and façade articulations – the possibilities are endless. The Hardie™ Architectural Collection combines the renowned durability and product performance of our existing exterior cladding portfolio with new distinctive textures and profiles. Created to complement each other, this curated cladding collection offers endless design possibilities so you can build modern homes from the ground up, with confidence. The Hardie™ Architectural Collection is backed by a suite of solutions, from guides to technical support and expert advice, giving Builders, Architects and Designers an uncomplicated framework to deliver full lightweight homes efficiently and with confidence.

Introduce drama and detail to your walls with the clean vertical lines of Axon™ Cladding. Incorporating the beauty and fine detail of painted vertical joint timber, but without time-consuming board construction or durability hassles, Axon is a range of vertically grooved panels with the detail of vertical joint timber.

Featuring a stepped shiplap joint on the long edges for easy installation, it can be gun nailed and cut cleanly with a circular saw using a dust-reducing fibre cement blade.

The clean horizontal lines of Linea™ weatherboards work beautifully on the expansive external walls of modern architecture.

Ideal for creating a Hamptons or coastal inspired look when combined with contrasting Axent Trims in new homes or renovations, Linea can also be confidently painted in dark colours. Innovative and durable, Linea weatherboards are resistant to shrinking, swelling and cracking and will hold paint longer than wood.

Weatherboards have been used in Australian homes since the 1850s and are a key factor of Victorian and Queenslander home styles. Today they're popular in modern coastal and Australian Hamptons style homes. Weatherboards help protect a building/structure from the harsh and unpredictable Australian weather, and natural elements such as sea spray.

Available in styles to match many heritage weatherboard homes, PrimeLine™ Weatherboards are a durable range of 9mm thick weatherboards for creating classic lines without the wonkiness of timber.

EasyLap™ panel is a pre-primed fibre cement sheet with a shiplap joint along its two vertical edges. Panels are finished with a site-applied, roll-on textured acrylic paint to achieve a subtle rendered texture look. Lightweight yet durable, EasyLap panel is an easy to install, cost-effective broadwall cladding solution.

EasyLap panel is designed for use in residential single and medium-density buildings, including alterations and additions, where a uniform broadwall cladding is required. Panels are suitable for use on either timber or light gauge steel framed homes.

Made by James Hardie for over 20 years, Hardie™ Tex Base Sheet is the original blue board. Hardie™ Tex Base Sheet is a strong, pre-primed base sheet that is finished on-site with a specialised texture coat system\*. Hardie™ Tex Base Sheet is the original way to create a decorative, monolithic rendered look without the need for masonry.

Hardie™ Tex Base Sheet is suitable for use as an external cladding in residential homes, including renovations and extensions, where a lightweight system with a monolithic rendered look is required.

The applications for Hardie™ Flex Sheet cover a wide range of design solutions for your home. Hardie Flex Sheets are suitable for use in residential extensions, second story additions and gable ends. It can also be used to line porches, verandahs, carports and for soffits and eaves. One of the most economical solutions available Hardie Flex is commonly used for board and batten style cladding. Don't overlook the durability and sophistication for new construction as well. It is a natural, un-sanded sheet that is immediately suitable for a paint finish and the installation could not be easier.

Villaboard™ is a heavy-duty wall lining compared to plasterboard. Ideal for use in bathrooms and wet areas, if the waterproofing fails you can rest assure that Villaboard won't. Resistant to damage from moisture, it won't deform or lose its structural integrity which means fewer call backs and less costly rectifications.

Villaboard™ also has incredible hanging power for tiles, hooks and fixings. With a tensile bond strength up to 75 per cent greater than wet area plasterboard, it can hold tiles with a maximum weight between 30 and 60 kg/m<sup>2</sup> depending on the thickness of the tiles and Villaboard™ sheet used, ensuring expensive bathroom tiles are always secure - Please refer to the product installation guide for further information of maximum tile thicknesses and weights. Use it on walls and ceilings in bathrooms, laundries, kitchens and high-traffic areas, and even in multi-residential and commercial buildings.

As a versatile interior wall sheet, Versilux™ Lining can be used in laundries, kitchens and high-traffic areas. It is also popular when used as a soffit and can be installed in exposed beam ceilings. Unlike Villaboard, Versilux is square on the long edges for making butt joins and accessory joins doing away with set joints that require extra finishing time and cost.

## HARDIE PANEL COMPRESSED SHEET

Hardie™ Panel is a compressed fibre cement (CFC) sheet for ceramic tile finishes over timber or lightweight steel joists. Used as substrate for tiled balconies and tiled internal wet-area floors, HardiePanel is a durable alternative to particle board and plywood and is resistant to damage from moisture. Strong and resilient, Hardie Panel can also be used as formwork in a range of industrial and commercial applications such as bridges and roadworks.

Deemed non-combustible in accordance with the provisions of the Building Code of Australia, it can also be used for floors in bushfire prone areas.

## HARDIE TILE UNDERLAY

A smooth and stable internal underlay for ceramic tile finishes, Hardie™ Ceramic Tile Underlay helps protect tiles against cracking caused by the movement that occurs naturally in timber, particle board and plywood substrates.

## HARDIE EDGE BASE TRIM

James Hardie Edge Base Trim is fabricated from high quality powder-coated aluminium. It is perfect for residential and selected commercial applications.

\* Available in pack and loose

Expertly designed for low rise, high rise and commercial building facades, fascia's and soffits the ExoTec® Façade Panel and System is a deemed-to-satisfy, non-combustible cladding system. Aesthetically, ExoTec is a smooth sanded compressed fibre cement (CFC) façade panel that works with a top-hat system to create geometric designs with 10mm express joints. The 9mm thick panels are fully sealed on all sides, to reduce limit panel expansion, as well as being high impact resistant and durable.

ExoTec can be fixed with concealed fasteners or purposefully exposed ones. For a custom look, it can be painted on-site with a wide range of acrylic textures or factory finished off-site in polyurethane or metallic colours.

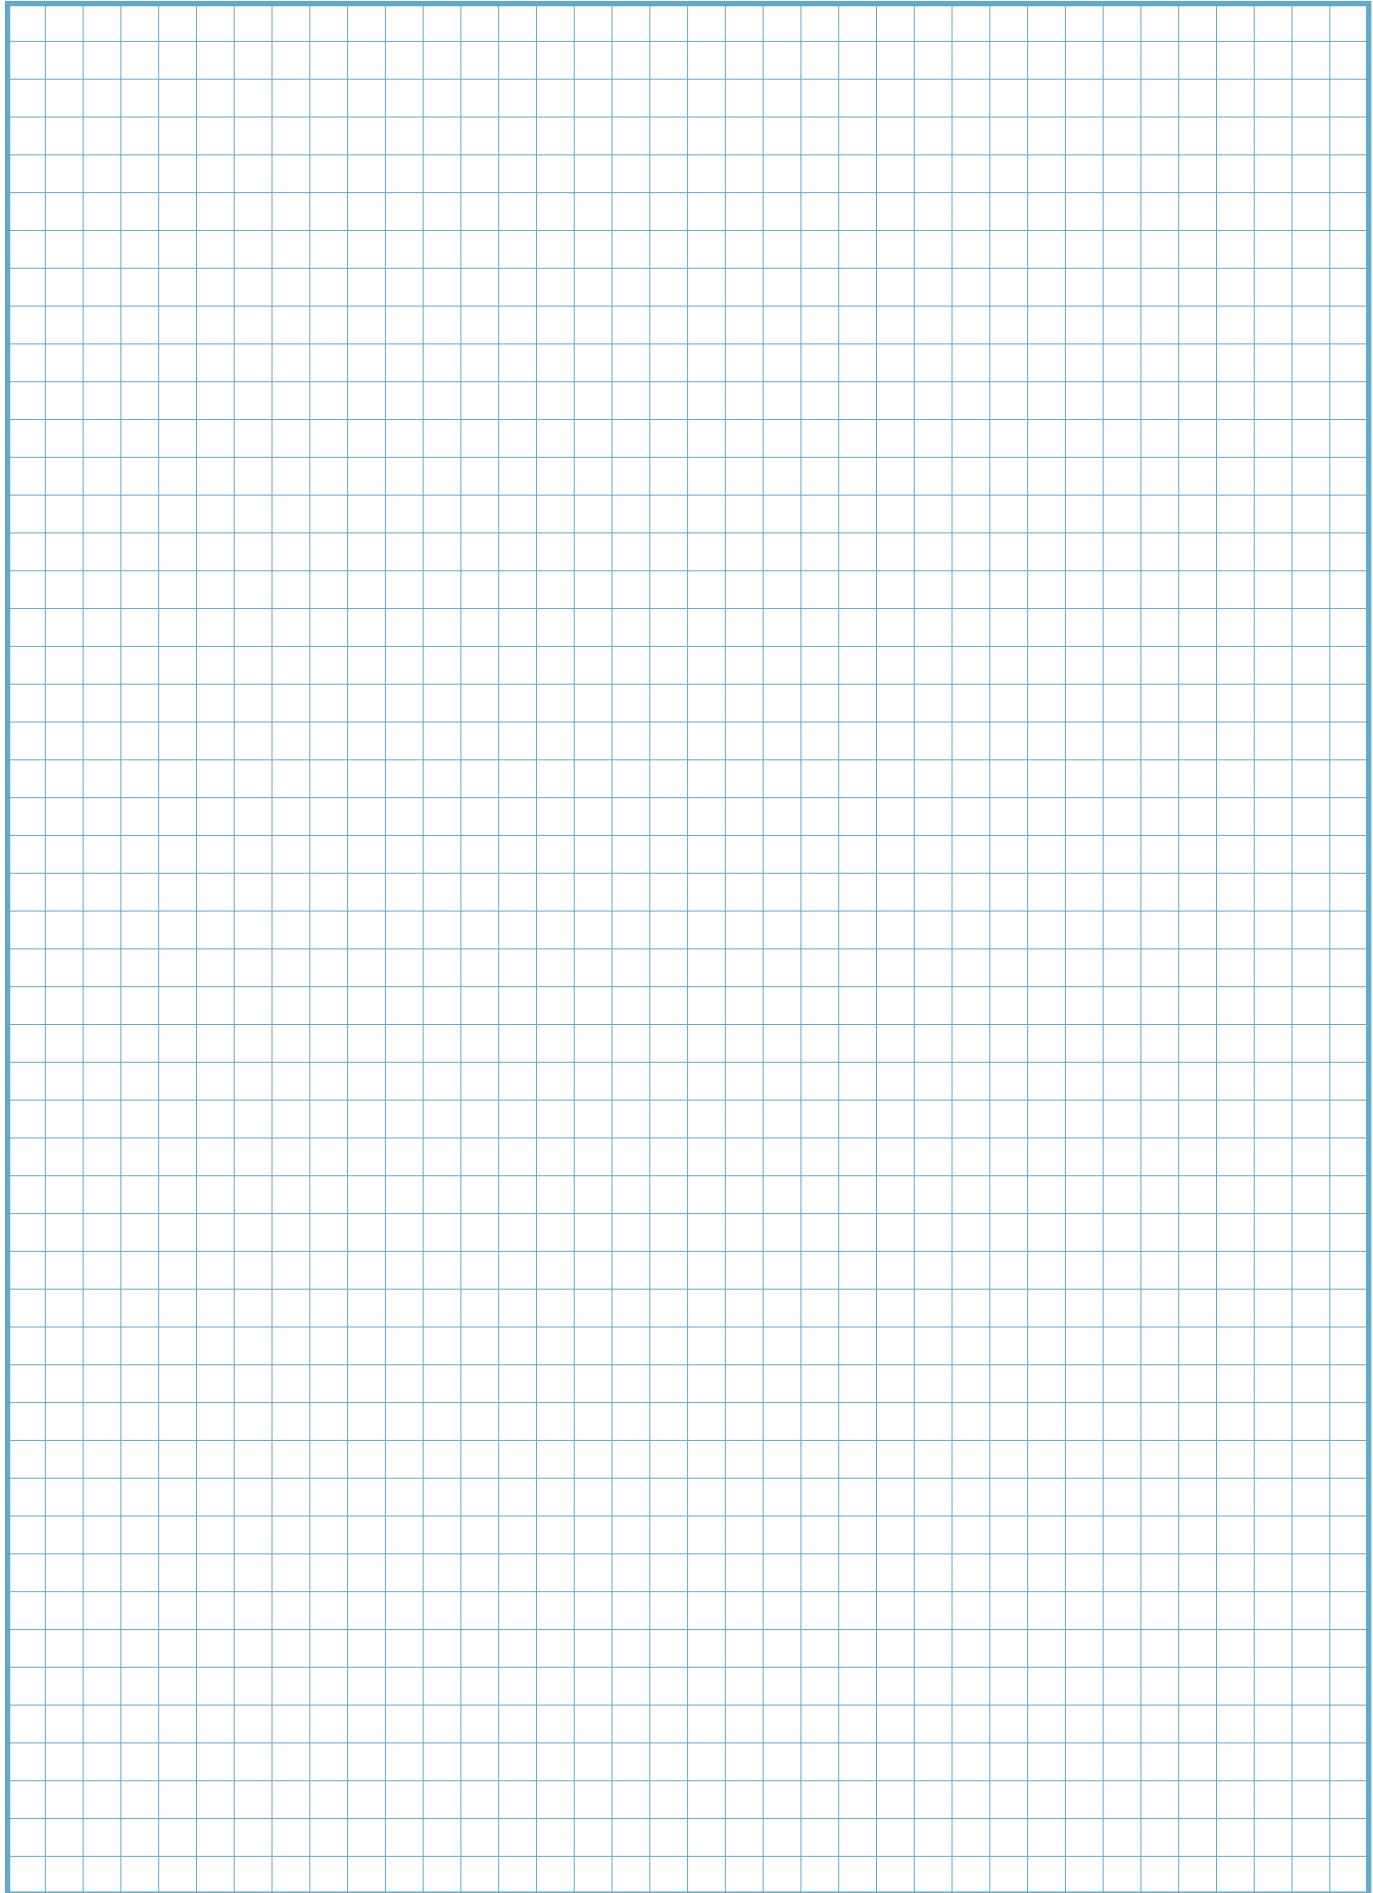

# Hardie RAB Board
